Charlesworth's Orchid Catalogue.

1906

Presented to the L. H. Bailey Hortorium
by the Missouri Botanical Garden, 1972.

INTRODUCTION.

AGAIN, in issuing our Catalogue for 1906, we beg to thank our numerous patrons for their past esteemed support.

In making the statement that this is the LARGEST and MOST COMPLETE CATALOGUE of Orchids ever offered to the public, we wish to draw attention to the fact that ours differs from the General Horticultural plant catalogue in that

EVERY PLANT DESCRIBED IS IN OUR OWN NURSERIES.

We regret that our large stock compels us to curtail descriptive matter, for the purpose of keeping the catalogue within serviceable dimensions.

All plants GUARANTEED TRUE TO NAME and description; should any customer, on receipt of plants ordered, be in any way dissatisfied, the plants may be returned to us.

If, by accident, any plant flowers untrue to name and description, the purchase money will be refunded, with five per cent. interest added, and no further claim admitted.

The paintings of several of the very choice Plants can be seen on application.

In sending order by post or telegram, it will be sufficient to quote numbers in Catalogue.

433	**HUTTONII.** This remarkable and beautiful species was shown by us on July 4th, 1905, and received a First Class Certificate from the Royal Horticultural Society. It was discovered many years ago by Hutton, and appears to have been lost sight of in Europe. The species connects Cymbidium and Grammatophyllum, the large, grooved, pseudo-bulbs, each furnished with two or three bright green leaves, much resembling those of G. multiflorum. The manner of producing the pendulous racemes of thick-textured flowers is nearest to Cymbidium Devonianum. Two varieties were shown, one lighter in colour than the other, the longest raceme bearing 15 flowers. Flowers about 2 inches across, yellowish-white, densely spotted with purple, the petals being also tinged with purple on the outer halves. Sepals obovate, acuminate, petals narrower and reflexed; side lobes of the lip large and erect; middle lobe oblong, acuminate. Good plant, 3 bulbs, making a strong new growth	3	3	0

1476	**OAKWOODIENSE.** This choice Odont. was originally described as a variety of Odont. crispum. The size and shape of the flower favours crispum so much that this could be excused. The tinge of yellow in the ground colour and the deep chestnut blotches and spots have no doubt been derived, naturally, from probably Odont. luteo-purpureum. The flower is of splendid size and specially fine substance. Magnificent plant, 6 specially fine bulbs, all with leaves, 1 strong lead	78	15	0
1477	**OSSULSTONII.** See Painting. A charming secondary hybrid from Od. crispo-Harryanum × Od. Pescatorei fine spotted variety; sepals and petals cream yellow, the former being flushed with rose; both bear numerous reddish brown blotches; lip cream yellow, spotted with brown on the basal half. This hybrid flowered from a very small seedling and therefore gives great promise. Splendid plant, 3 strong bulbs, well leaved, 1 strong lead Price on application

PHALÆNOPSIS.

We have no hesitation in stating that our stock of Phalænopsis is now the finest in the world. At the moment of making this catalogue we have in our nurseries the total of over 1,100 flower spikes.

The reproduction of one of our Phalænopsis houses (shown at the front of catalogue) photographed last year will convey some idea of this magnificent display when seen in flower.

RIMESTADIANA.

We hold a magnificent stock of this easily grown, free flowering species. Its large pure white flowers are gracefully formed on the flower spike, and from a florist's point of view, it is one of the most useful Orchids for decorative purposes.

Nos.			£	s.	d.
1794	**Sophro-Cattleya DORIS** (*Sop. grandiflora* × *Catt. aurea*).	This is possibly the most handsome of all the Sophronites crosses ; a fine well set flower, rich deep scarlet in colour, with deeper coloured lines in the well formed labellum. Nice plant, 4 bulbs, all with leaves, 2 are leads .. Price on application			
1795	,, **EXIMEA** (*Catt. Bowringiana* × *Sop. grandiflora*).	See Painting. A very interesting and pretty hybrid, perfect in shape and fairly intermediate ; sepals and petals bright purplish-rose, the lip much darker, with a light yellow throat. The plant, although dwarf, has a splendid constitution, and is very attractive when in flower. Strong plant, 7 good bulbs, 5 with leaves, 1 good lead	10	10	0
1796	,, **NYDIA** (*Sop. grandiflora* × *Catt. culummata*).	See Painting. One of the finest results achieved with the use of the brilliant little Sophronites grandiflora. Flowers of fine size and exceptional substance ; uniform dark scarlet ; with numerous small purple spots on the sepals and petals. F.C.C., R.H.S., Nov. 12th, 1901. Portion of the certificated plant. Fine plant, 4 strong bulbs, 3 with leaves, 1 good lead	36	15	0
1797	**Sophro-Lælia GRATRIXÆ** (*Lælia tenebrosa* × *Sop. grandiflora*).	See Painting. A richly coloured hybrid, with flowers strangely like those of L. tenebrosa in shape, though much smaller. Sepals and petals purplish-red, tinged with orange colour ; lip purplish-red, with purple veining. The blending of the colour gives a glowing appearance to the flower and renders it most attractive. Good plant, 3 fine bulbs, all with leaves, 1 good lead..	21	0	0

SPECIAL NOTICE.

Lælio-Cattleya, Cattleya, Lælia, Brasso-Cattleya, Brasso-Lælia, and Brasso-Cattleya Hybrids.

Having for years made a speeial feature of this interesting class of plants, we have now formed a most extensive and choice collection.

A eomplete list of the plants follows, and we shall be pleased to quote prices on applieation.

The fact that we have been able to stage plants all the year round at the Meetings of the Royal Hortieultural Soeiety, proves the usefulness of this class. Their robust constitution and floriferous habit has made them very popular.
